PROFESSIONAL EXPERIENCE

DevOps Engineer <i>Tata Consultancy Services (Client: American Express)</i> - Manage and support AWS-based production environments ensuring 99.9%+ system availability and reliability. - Reduced incident resolution time by 30% through proactive monitoring, log analysis, and issue troubleshooting. - Support CI/CD pipelines using GitHub Actions and Jenkins to streamline build and deployment workflows. - Assist in containerized application deployments using Docker and Kubernetes-based environments. - Improved operational efficiency by 20% by automating repetitive infrastructure and operational tasks.	Aug 2024 – Present
--	--------------------

KEY DEVOPS PROJECTS

AWS Infrastructure Automation with Terraform - Build reusable Terraform modules to provision AWS infrastructure for dev/prod environments. - Automated provisioning of core resources including EC2, VPC, IAM roles, and security groups using Infrastructure as Code. - Implemented environment-based variable management and remote state handling to ensure consistent and maintainable infrastructure deployments. Docker & Kubernetes Deployment Pipeline - Built and optimized Docker images to containerize applications and deployed them on Kubernetes clusters. - Developed Kubernetes manifests for services, deployments, and scaling policies to enable reliable container orchestration. - Implemented CI/CD pipelines using GitHub Actions to automate build, container image creation, and deployment workflows. Production-Style DevOps Platform Setup - Designed an automated CI/CD pipeline integrating GitHub, Jenkins, Docker, and Kubernetes for continuous integration and deployment. - Automated application build, testing, containerization, and deployment stages to reduce manual intervention in releases. - Implemented a production-style deployment workflow to simulate real-world DevOps practices and improve deployment reliability.
