## PROFESSIONAL SUMMARY

DevOps Engineer with 2+ years of experience building CI/CD pipelines, managing production cloud infrastructure, and automating deployment workflows using AWS, Kubernetes, and GitOps practices. Experienced in designing highly available systems on a high-scale financial services account, implementing monitoring and observability solutions, and running ITIL-aligned incident management workflows. Strong expertise in Infrastructure as Code (Terraform, Ansible), containerization, and GitOps automation with ArgoCD. Proven track record of reducing MTTR, cutting manual operational effort, and delivering production-ready deployments on AWS.

## SKILLS

|                            |                                                                                                    |
|----------------------------|----------------------------------------------------------------------------------------------------|
| Programming & Scripting    | Bash, Python                                                                                       |
| Cloud Platforms            | AWS (EC2, VPC, IAM, S3, EKS, ECR, Route 53, CloudWatch, ALB/NLB, Secrets Manager), Microsoft Azure |
| CI/CD & GitOps             | GitHub Actions, Jenkins, GitLab CI, ArgoCD, GitOps Workflows, Webhook Triggers                     |
| Containers & Orchestration | Docker, Kubernetes (EKS), Helm, HPA, Ingress Controllers, Istio                                    |
| Infrastructure as Code     | Terraform (Modules, Remote State, Workspaces, DynamoDB Locking), CloudFormation, Ansible           |
| Monitoring & Logging       | Prometheus, Grafana, AlertManager, PromQL, CloudWatch, ELK Stack, Grafana Loki                     |
| ITSM & Incident Mgmt       | ServiceNow, Incident/Problem/Change Management, ITIL, CAB, RCA, SLA Management                     |
| Security & Compliance      | SonarQube, Container Vulnerability Scanning, Secrets Management, IRSA, IAM Least-Privilege         |
| Tools                      | Git, GitHub, Postman, Figma                                                                        |

## EXPERIENCE

### TATA CONSULTANCY SERVICES (Client: American Express)

Aug 2024 – Present

DevOps Engineer

- Managed AWS production cloud infrastructure supporting millions of daily financial transactions, maintaining 99.9%+ SLA through proactive monitoring, incident response, and automated remediation across multi-environment EKS deployments.
- Reduced MTTR by 30% by building Prometheus, Grafana, and AlertManager-driven PagerDuty alerting integrated with ServiceNow for ticket creation and SLA tracking; used ELK Stack and Grafana Loki for centralized log analysis.
- Owned incident, problem, and change management workflows in ServiceNow — logging major incidents, driving root-cause analysis (RCA), and submitting CAB-approved change requests — ensuring ITIL-aligned compliance.
- Designed and maintained CI/CD pipelines using GitHub Actions and Jenkins with Git webhook triggers, multi-stage Docker builds, and automated Helm deployments to EKS, cutting release cycle time significantly.
- Implemented GitOps workflows with ArgoCD (declarative sync, self-healing rollback) and automated EC2 provisioning, AMI rotation, IAM audits, and log rotation via Ansible/Bash — improving operational efficiency by 20% and eliminating ~8 hours/week of manual effort.
- Enforced infrastructure security and compliance via SonarQube static analysis, container vulnerability scanning, AWS Secrets Manager, and IAM least-privilege policies — reducing security findings by 35%.

PROJECTS

CI/CD Pipeline to EKS with ArgoCD and GitOps | *GitHub Actions, ECR, ArgoCD, Terraform, EKS*

- Built a production-grade GitOps platform using GitHub Actions, AWS ECR, and ArgoCD: pipelines lint, test, build multi-stage Docker images, push to ECR, update Helm tags, and sync to EKS — sub-8-minute deployment lead times, zero manual kubectl operations.
- Authored reusable Terraform modules for EKS, ECR, IAM IRSA roles, ALB Ingress, and VPC networking — enabling identical dev/prod environment spin-up in under 15 minutes.

AWS Infrastructure Automation with Terraform | *Terraform, CloudFormation, Python, AWS*

- Built a reusable Terraform module library covering VPC, subnets, security groups, EC2, IAM, S3, and CloudWatch alarms, with supplementary CloudFormation templates and Python automation scripts.
- Implemented S3 remote state with DynamoDB locking and integrated terraform plan/apply into GitHub Actions CI/CD, eliminating ad-hoc manual production changes and cutting provisioning time from 2–3 days to under 20 minutes.

Production-Style Monitoring and Observability Platform | *Prometheus, Grafana, ELK, Kubernetes*

- Deployed Prometheus and Grafana on Kubernetes with custom PromQL dashboards tracking p99 API latency, pod crash-loop rates, and node CPU/memory saturation.
- Configured AlertManager with tiered alerting and PagerDuty integration, auto-generating ServiceNow incident tickets for critical SLO breaches; centralized log aggregation via ELK Stack, reducing mean time-to-identify root cause by 40%.

KEY ACHIEVEMENTS

- Reduced MTTR by 30% through Prometheus/Grafana/AlertManager alerting integrated with ServiceNow and PagerDuty.
- Improved operational efficiency by 20% and eliminated ~8 hours/week of manual effort via ArgoCD GitOps and Ansible automation.
- Cut infrastructure provisioning time from 2–3 days to under 20 minutes using Terraform CI/CD gates.
- Reduced security findings by 35% through SonarQube, container scanning, and IAM least-privilege enforcement.
- Achieved sub-8-minute deployment lead times with zero manual kubectl operations via a GitOps ArgoCD platform.
- Reduced mean time-to-identify root cause by 40% by building a Prometheus/Grafana/ELK observability platform.

EDUCATION

Arya Institute of Engineering and Technology (AIET)

Nov 2019 – May 2023

- B.Tech. in Computer Science & Engineering — 91.2% (First Class with Distinction)
